

Post Seeding Instructions

Watering instructions:

- Please keep your seeded areas watered. This is extremely important. You may have to water daily if it is hot, dry, and/ or windy. Please avoid over watering, especially on slopes where erosion can occur. If the soil looks moist, you should not need to water.
- Keep the ground moist until the grass is about one and a half inches tall. At this time, you may start to water less frequently to encourage deeper root growth.

Mowing:

- When you start mowing your new grass, mow in different directions to help level the yard, reduce stress on wheel/foot tracks, and get an overall better cut.

Other:

- Keep traffic to a minimum on newly seeded areas.
- Do not use herbicides until the grass has been mowed at least two times.

Do not hesitate to call if you have any problems or concerns.
